

WashAlert™

with Service Alert

The Ultimate
LAUNDRY ROOM amenity
wirelessly connects residents

Speed Queen's Quantum® Wash Alert™ with Service Alert system is a revolutionary add-on to our Quantum Control. Offering remote washer and dryer availability for residents and students while providing route operators with real-time service alerts.

QUANTUM® CONTROLS & WASH ALERT™ WITH SERVICE ALERT

Speed Queen laundry equipment with Quantum® controls and software is required for networking the Wash Alert™ with Service Alert System. Quantum laundry machines are wirelessly networked with a special networking kit for each machine. They are linked to a network controller, near the laundry room facility.

The Wash Alert™ with Service Alert data is sent to a central computer via the internet to your office computer. The web pages connect to the central computer to retrieve machine data to be displayed on the website or laundry channel.

Quantum controls interface directly with coin activation and all major debit, credit cards or central pay systems. Card and coin systems run independent from networked Wash Alert™ with Service Alert.

- Text message notification support
- Unauthorized coin vault notification
- Ability to hide unused reports
- Cycle usage graphs
- Custom default presets

- Identify fault codes before service is dispatched
- Program automatic shut down times
- Less set up costs
- Faster installation
- Conserve energy with multi-level vend prices, premium cycles and dryer top off times

- Improved machine search
- Customizable machine status colors
- 3D machines in location view
- Remote programming that comes with networking
- Remote price change and auditing capability

HOW WASH ALERT WORKS

The computer communicates with your laundry equipment through the network controller and stores data in a database on the computer.

The website then connects to the database on the computer and displays laundry equipment status on website.

Computer can also email weekly or monthly revenue/usage reports to route operator by location.

HOW SERVICE ALERT WORKS

The computer communicates with your laundry equipment through the network controller and stores the data in a database on the computer.

The computer monitors service codes and can send an email to notify of laundry equipment events. EX: Service door opening, coin vault opening, fill alarm, drain alarm.

Computer can also email weekly or monthly service reports by location.

SYSTEM REQUIREMENTS

The PC application has the following minimum recommended PC requirements:

Keyboard and mouse

Microsoft Windows 7

1 GHz processor

1 Gb RAM

XGA (1024x768)

CD or DVD drive

Tablet installation using SD card or USB drive, Alliance USB IR device (If no full size USB use micro USB to USB adapter)

The PDA software requires 5 MB of available storage space, depending on processor and components installed on PDA. Systems that support the PDA software include the following:

- Microsoft Windows Mobile 2003 or greater
- Infrared communication window (IrDA) or standard SD expansion slot

COMPONENTS FROM SPEED QUEEN

PURCHASE FROM GENUINE PARTS	PART NO.
Quantum Multi-Housing Software	202179
Wireless Network Controller*	NK320
Wireless Network Board	NK301+

* Controller communicates with up to 250 machines within wireless range
+ Prior to 2015

NOTE: Small chassis machines built after 1/1/2015 require NEW Wireless Network Board 203327
